PREFACE

This report provides highlights on the demographic and economic characteristics of Spanish Americans in North Dakota, 1980. Data for this report was found in the following Bureau of Census publications:

1980 Census of Population, General Population Characteristics: North Dakota. PC80-1-B36. U.S. Department of Commerce, Bureau of the Census.

1980 Census of Population, General Social and Economic Characteristics: North Dakota. PC80-1-C36. U.S. Department of Commerce, Bureau of the Census.

This report describes persons who identify themselves as members of one of the following Spanish American groups: Mexican, Puerto Rican, Cuban, or Other. The category "Other" includes persons whose origins are from Spain or the Spanish-speaking countries of Central or South America, or they are persons identifying their origin or descent as being Spanish, Spanish-American, Hispanic, Latino, etc. In this report, households and families are classified by the race of the householder.

Spanish Americans In North Dakota

Number

* In 1980, there were 3,902 Spanish Americans in North Dakota, which was .6 percent of the state's population. Over half of these persons (59.4 percent) were Mexican, 6.3 percent were Puerto Rican, 1.5 percent were Cuban, and 32.8 percent were of other Spanish descent (Table 1).

* There were more Spanish American males than females overall. Cubans showed the highest gap between genders with 57.9 percent of the Cuban population male and 42.1 percent of the population female (Table 1).

* The median age of Spanish Americans overall in North Dakota was 19.8 years. This was low compared to the median age of 28.3 years for residents of the state in general. Cubans had the highest median age (21.5 years) of all Spanish American groups (Table 2).

* Elderly (60 years and over) made up only 3.5 percent of the Spanish American population.

Marital Status

* Nearly one quarter (24.1 percent) of all Spanish American women and 37.2 percent of all Spanish American men were single. These proportions are only slightly higher than those of residents in general in North Dakota; 23.0 percent of all women and only one third of all men (32.7 percent) in the state were single Figures 2 and 3).

* The highest proportion of single men was found among Puerto Ricans (45.5 percent) while the highest proportion of single women was found among those of other Spanish descent (27.2 percent) (Table 3).

* A greater proportion of Spanish American women were married compared to men (65.7 percent and 54.4 percent, respectively). The proportion of married Spanish American women was higher than the proportion of married women throughout the state (60.5 percent); however, the proportion of married Spanish American men was lower than the proportion of married men throughout the state (60.8 percent).

* The percentage of divorced persons was slightly higher among Spanish Americans than it was among residents of the state as a whole (5.2 percent and 3.8 percent, respectively). The divorce rate was highest among Mexican men and Puerto Rican women (6.0 percent and 6.3 percent, respectively) (Table 3).

Age

* Just over one-half (50.7 percent) of all Spanish Americans in North Dakota were under 20 years of age (Figure 1). A majority of these persons (58.1 percent) were under 10 years of age.

SOURCE: U.S. Bureau of Census 1981b (Table 23).

Fertility

* Fertility levels (as measured by the number of children born per 1,000 women in the population) for Spanish American women were higher than those for North Dakota women in general. The fertility level of Spanish American women aged 15 to 24 years was nearly twice the level for women of that age for North Dakota as a whole (Table 4).

* Puerto Ricans had the highest fertility level for Spanish American women aged 15 to 24 years with 879 children born per 1,000 women. High levels of fertility among Spanish Americans, relative to the general population, were also found in the 25 to 34 and 35 to 44 year age cohorts. Spanish American women in North Dakota aged 25 to 34 years reported fertility rates of 1,804 children ever born per 1,000 women and 3,827 children born per 1,000 Spanish American

women aged 35 to 44 years old. This is in contrast to fertility rates of 1,660 and 3,039 children born per 1,000 North Dakota women in general aged 25 to 34 and 35 to 44 years, respectively.

* Mexican women showed the highest fertility level for Spanish American women aged 25 to 34 years while Cubans had the highest fertility level for women aged 35 to 44 years (Table 4).

TABLE 4. BIRTH RATES OF SPANISH AMERICAN WOMEN IN NORTH DAKOTA, 1980

	Total North Dakota Women	Total Spanish Origin	Mexican	Puerto Rican	Cuban	Other Spanish
Women 15-24 yrs old	64,474	449	234	33	6	176

Women 35-44 yrs old	31,349	162	76	5	2	79
Children ever born	95,257	620	325	10	16	269
Per 1,000 women	3,039	3,827	4,276	2,000	8,000	3,405

SOURCE: U.S. Bureau of Census 1981c (Table 99).

Education

* In 1980, 28.3 percent of all Spanish Americans in North Dakota aged 25 and over had completed fewer than nine years of formal education. Men over age 25 were slightly less educated than the women; 29.9 percent of the men had an eighth grade education or less compared to 26.6 percent of the women (Table 5 and Figure 4).

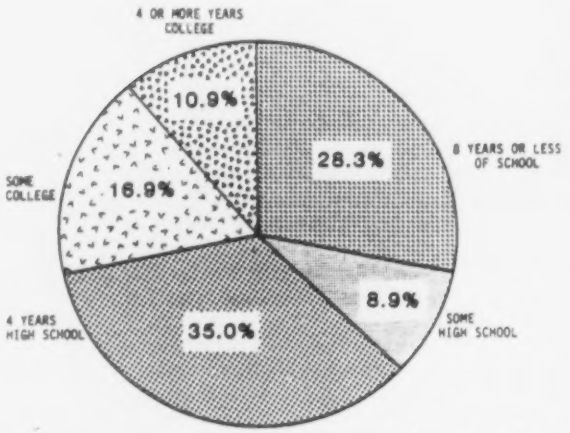

Figure 4. Total Years of School Completed by Persons of Spanish Origin in North Dakota, 1980.

* Slightly more than one in three (35.0 percent) Spanish Americans in the state (aged 25 and over) had completed four years of high school. Again, a higher percentage of females (39.9 percent) compared to males (30.4 percent) reached this educational level. Only 10.9 percent of all Spanish Americans had completed four or more years of college.

* In comparison to other residents of the state and the nation, Spanish Americans were slightly less educated overall. However, it is interesting to note that an equal or greater proportion of Spanish Americans completed four years of high school than residents in North Dakota and the United States overall (Table 6).

Labor Force Participation

* In 1980, 69.5 percent of all Spanish Americans aged 16 years and over were in the labor force. Cubans had the highest labor force participation rate among Spanish Americans (94.9 percent) while persons in the *Other Spanish descent* category of Table 6 had the lowest labor force participation rate among Spanish Americans in the state (62.5 percent). These rates as well as rates for each type of Spanish American are considerably higher than the 61.4 percent labor force participation rate for North Dakotans overall.

[1]Percents do not total 100 because of rounding errors.

SOURCE: U.S. Bureau of Census 1981c (Table 99).

* Men were more likely than women among Spanish Americans to be members of the labor force, 86.4 percent and 50.5 percent, respectively.

* Labor force participation rates for Spanish American men were higher than those for men in general in the state (75.6 percent). Spanish American women also showed a slightly higher labor force participation rate than women in general in the state (47.3 percent).

all North Dakotans in 1980 (5.3 percent). Fully 15 percent of Spanish American men (15.1 percent) and 11.3 percent of Spanish American women aged 16 and over in the civilian labor force were unemployed.

* When looking specifically at males and females, the percentages of unemployed Spanish American men and women were much higher than the percentages of unemployed men and women as a whole (5.8 percent and 4.6 percent, respectively).

SOURCE: U.S. Bureau of Census 1981c, (Table 101).

Americans were employed in food service occupations and 5.8 percent were in cleaning and building service occupations.

* When focusing on genders, differences in occupations occur. Over one-third (37.5 percent) of all employed Spanish American women were in service occupations while a comparable proportion (34.6 percent) were employed in technical, sales, or administrative support occupations. In contrast, almost one-fourth (22.9 percent) of all employed Spanish American men were employed in precision production, craft, and repair occupations with an equal proportion (22.9 percent) employed as operators, fabricators, or laborers (Table 8, next page).

Income

* The median income for all Spanish American families in North Dakota was $12,323 in 1979 (Table 9 and Figure 5). In comparison, the median income for all families in North Dakota was $18,023 in 1979.

* In North Dakota, Cuban families had the lowest median income in 1979 among Spanish Americans ($7,188). More than half (57.1 percent) of all Cuban families made less than $10,000 in 1979. In contrast, families of other Spanish descent had the largest median income among Spanish Americans ($17,634). However, 43.4 percent of these families still made less than $10,000 in 1979 and only 10.5 percent made over $35,000 in 1979 (Table 9).

SOURCE: U.S. Bureau of Census 1981c, (Table 102)

poverty were related children under the age of 18. In contrast, less than 1 percent of those falling below the poverty line were 65 years and over.

* When focusing specifically on families, 17.8 percent of all Spanish American families were poverty stricken in 1979. Over one-third (37.5 percent) of all Puerto Rican families fell below the poverty level. This rate was almost four times the rate for families in North Dakota overall.

* Nearly a quarter (23.3 percent) of Spanish American families falling below the poverty line in 1979 were headed by females with no husband present. Over 70 percent (71 percent) of these families contained children under 18 years of age (Table 10).
